

KAMIL RASATH M

Frontend Developer

☎ +919514312250 ✉ kamilrasath@gmail.com 📧 kamil-rasath-01b78821a 📍 Tirunelveli, India

SUMMARY

Frontend Developer with 4+ years of experience building responsive, enterprise-grade web applications for IoT platforms. Specialized in real-time dashboards, live data integration via APIs, and dynamic, data-driven user interfaces. Committed to performance optimization, reusable component architecture, and seamless cross-browser compatibility.

SKILLS

Frontend :	React.js, Typescript, Javascript (ES6+), HTML5, CSS3, Tailwind CSS, Bootstrap
State & Data Flow :	Zustand, Context API, Redux Toolkit
Charts & Visualization :	Apexcharts.js, Plotly.js, Recharts
UI Libraries :	shadcn/ui, GridStack.js, jQuery
Backend Integration :	REST APIs, WebSockets, MQTT
Tools :	GIT, Linux, GitHub, Vite, Babel

EXPERIENCES

Frontend Developer | Full-time

Jun 2022 - Present
On-site • Tirunelveli

Bevywise Networks

- **Developed** real-time dashboards **to monitor 500+** industrial devices, **resulting in a 40% reduction in** production monitoring delays.
- **Integrated** live data from industrial machine sensors and inventory systems into a centralized platform, **enhancing operational oversight**.
- Engineered scalable data pipelines utilizing **WebSockets** and **REST APIs** to stream live IoT sensor data into dynamic dashboards, managing client-side state efficiently with **Zustand/Redux** Toolkit to minimize redundant UI re-render
- **Designed** and **developed** intuitive user interfaces, **increasing user engagement** and accessibility of complex data insights.
- **Incorporated** sensor data into interactive 2D and 3D SVG layouts, **utilizing dynamic color-mapping for improved visual status monitoring**.
- **Optimized** front-end application performance, resource bundle sizes, and rendering cycles, **achieving a 35% reduction in** dashboard load times.

PROJECTS

MES (Manufacturing Execution System)

2024 - Present

- Developed a cloud-based **Manufacturing Execution System (MES)** for garment manufacturing companies, integrating ERP systems with shopfloor operations to enable real-time production planning and execution.
- Built interactive dashboards to monitor **production planning, line balancing, shift management, operator efficiency, machine downtime, and defect/quality tracking**, providing actionable insights for production supervisors.
- Consolidated live machine sensor data, production metrics, inventory information, and shopfloor events into a centralized platform, improving visibility across the manufacturing process.
- Integrated frontend applications with backend services using **REST APIs and WebSockets**, delivering real-time production updates and live shopfloor monitoring.
- Developed reusable and responsive React components for KPI dashboards, production reports, and analytics, enabling users to monitor factory performance through intuitive visualizations.
- Collaborated with cross-functional teams to deliver scalable frontend features, optimize application performance, and enhance the overall user experience for garment manufacturing operations.

Technologies / Tools Used : React.js, TypeScript, Tailwind CSS, REST APIs, shadcn/ui

PROJECTS

IoT Platform (Solution Provider)	2023 - 2024
- Contributed as a Core UI Developer to a SaaS-based IoT platform for provisioning, monitoring, and managing large-scale connected devices with secure real-time communication. - Integrated live sensor data into interactive 2D and 3D SVG layouts, implementing dynamic color mapping and status indicators for real-time asset monitoring and fault visualization. - Developed customizable drag-and-drop dashboard modules using GridStack.js, enabling users to create personalized monitoring workspaces without developer intervention. - Built responsive and interactive data visualizations using ApexCharts.js to display device telemetry, production metrics, and operational KPIs in real time. - Integrated high-frequency data streams using WebSockets and MQTT, delivering low-latency updates across dashboards and real-time monitoring screens. - Collaborated with backend engineers to integrate REST APIs and optimize data synchronization between IoT devices, cloud services, and frontend applications.	
<i>Technologies / Tools Used : React.js, TypeScript, GridStack.js, ApexCharts.js, SVG, REST APIs, WebSockets, MQTT</i>	

CrystalMQ (Cloud MQTT)	2022 - 2023
- Developed responsive and user-friendly web interfaces using HTML5, CSS3, and JavaScript for a cloud-hosted Managed MQTT Broker Service. - Built intuitive dashboards for device onboarding, broker configuration, topic management, and client connection monitoring, simplifying IoT device administration. - Integrated REST APIs and MQTT messaging to display real-time device status, connection health, and message activity within interactive dashboards. - Designed dynamic UI components for monitoring connected devices and visualizing live MQTT communication, improving operational visibility. - Collaborated with backend developers to integrate secure authentication, broker management, and device communication features into the frontend application. - Optimized the user interface for responsiveness, cross-browser compatibility, and improved user experience across desktop and tablet devices	
<i>Technologies / Tools Used : HTML5, CSS3, JavaScript, Bootstrap, MQTT</i>	

EDUCATIONS

Sadakathullah Appa College Tirunelveli	Jun 2020 - May 2022
<i>Master of Computer Science</i>	
Sadakathullah Appa College Tirunelveli	Jun 2017 - May 2020
<i>Bachelor of Computer Science</i>
